SUMMARY

Software Engineer specialized in web development (6+ years) and Ruby on Rails (5 years). Back-end focused, but fluent across the stack. Shipped production systems at every scale and have a proven track record of mentoring, leading architecture decisions, and tackling complex technical challenges in distributed and international teams.

Lived as a nomad for the last decade, alternating periods of IT work (see below), other jobs, volunteering, and full-time travel. Now settling down and ready to dedicate myself fully to a new long-term position.

Open to relocating and available immediately.

WORK EXPERIENCE

Senior Software Engineer · [SingleOps](#)

Jul 2022 – Apr 2023 | Atlanta, GA, USA (Remote)

As part of a **fully remote and international** engineering team of 50+, I worked on an overhaul of the project management system (including scheduling, invoicing, etc.) of a SaaS platform built with Rails & React and used by green-industry businesses to manage their operations. As a senior software engineer, I also:

- **Mentored** junior team members, improving code quality and reducing technical debt
- Created **structured documentation** of a deeply tangled legacy workflow, boosting team productivity
- Drove **design decisions**, authoring detailed architectural proposals that gave visibility to all stakeholders

Ruby on Rails Developer · [University of Melbourne](#)

Dec 2018 – Apr 2019 | Melbourne, Australia

Overhauled a critical data aggregation and processing service used by multiple departments across the university. Improved execution time from ~2h to <10min (**90% gain**) by optimizing the database (indexing, partitioning), infrastructure (horizontal scaling, batch processing), and code (n+1 queries, state machine).

Founding Engineer → Lead Developer · [Tilkee](#)

Feb 2014 – Sep 2016 | Lyon, France

Founding engineer at Tilkee, an online business proposal tracking platform. Joined at the product-idea stage and built a marketable MVP from scratch in Ruby on Rails. Then led the engineering side of the company as it grew all the way to profitability, taking on a **Lead Developer** position:

- **Scaled the engineering team** to 10, overseeing hiring, mentoring, and coordinating workload
- Introduced Agile/Scrum practices from the ground up
- Determined technical priorities in collaboration with stakeholders and product owners
- Took charge of **architectural decisions**, including strategic migrations such as refactoring the original monolith into an AngularJS front-end, a Rails REST API, and Node.js microservices
- Remained hands-on and tackled sensitive technical challenges such as ERP/CRM integrations, payment gateways, GDPR compliance, and major reliability/scalability improvements

Junior Developer · [ThredUP](#)

Feb 2013 – Feb 2014 | San Francisco, CA, USA + Remote

Was part of an engineering team in an Agile (Scrum) environment, developing the website (full-stack Ruby on Rails) and native mobile apps of a high-traffic e-commerce platform.

Apprentice Engineer · [Alten](#)

Oct 2011 – Jun 2012 | Villeneuve d'Ascq, France

Contributed to both pre-sale phases (RFP responses, technical studies, feasibility analysis, load estimation) and delivery phases (needs assessment, design, development, deployment) of various projects.

Network technician / Developer · [Lenet](#)

Jan – Aug 2011 | Atlanta, GA, USA

Handled client relationships (needs analysis, project monitoring, software and hardware troubleshooting); installed and set up web servers, workstations, and VoIP phone systems; built websites with different CMSs.

SKILLS

Languages:

French (native)
English (fluent — TOEIC 975/990 in 2011, primary daily language since 2016)
Spanish (conversational)

Technical:

Back-end: Ruby on Rails and its ecosystem (RSpec, Sidekiq), SQL & NoSQL databases (Postgres, Redis), Node.js
Front-end: React, AngularJS, Vue.js, Hotwire
DevOps / Tools: Heroku, AWS, Git, CI/CD, Docker
Practices: Test Driven Development (TDD), Clean Code & SOLID principles, AI-assisted development

EDUCATION

Master's Degree · [IG2I, Central School Lille, France](#)

2008 – 2013

IT and Industrial Engineer, specialization in Software Development

PERSONAL

Travel & Nomad Lifestyle

2016 – 2026

- Explored 40+ countries
- Focused on cultural exchanges, language learning, and authentic experiences
- Worked and volunteered in a wide variety of roles and environments along the way
